## [6001]-4002

## **ENGINEERING PHYSICS**

(2019 Pattern) (Semester - II) (Credit System) (107002)

*Time* : 2½ *Hours*]

[Max. Marks: 70]

Instructions to the candidates:

- 1) Question No. 1 is compulsory.
- Q.No. 2 to Q.No. 9 carry equal marks. *2*)
- 3) Figures to the right indicate full marks.
- Assume suitable data, if necessary.
- Use of electronic calculator is allowed.

Physical Constants:

- 1) Mass of electron
- Charge on electron *2*)
- Planek's constant 3)

Q1) Write correct option of given questions with Answer. (1 mark each):

According to Dr. Broglies hypothesis, the wavelength  $\lambda = \frac{h}{n}$  is applicable i)

for

- **Photons** a)
- Matter particles b)
- Either matter particles or photons c)
- Both matter particles and photons
- According to Heisenberg's uncertainty principle
  - a)  $\Delta x.\Delta p \ge \frac{h}{2n}$ c)  $\Delta x.\Delta p \ge \frac{h}{6n}$

*P.T.O.* 

111)		chrodinger's time independer pendent of time.	nteq	uation of a particle is
	a)	Kinetic energy	b)	Potential energy
	c)	Total energy	d)	Wave function
iv)	Fern	ni level for a metal or conducto	or is h	ighest energy level occupied by
	elec	trons at		
	a)	0°C	b)	0°F
	c)	0°K	d)	None of the above
v)	Hall	effect is true for		
	a)	Metals only		9
	b)	Semiconductors only		
	c)	For N-type semiconductors of	nly	
	d) _	Both metal and semiconductor	rs.	
vi)	The	magnetic materials exhibit the	e pro	perty of magnetisation because
7	<b>%</b> –			
	a)	Orbital motion of electrons	√b) ^	Spin of electrons
••>	c)	Spin of nucleus	d	All of the above
V11)		perconductor is a perfect		naterial.
	a)	Insulator	b)	Semiconductor
	c)	Dielectric O'	d)	Diamagnetic
viii)		neling of Cooper pairs througerconductors is called	gh an	Onnes effect  Kerr effect
	a)	Josephson effect	b)	Onnes effect
	c)	Meissner effect	d)	Kerr effect
ix)	With	n increase in size of nanopartic	les it	
	a)	Increases	b)	Decreases
	c)	Remains same	d)	Difficult to predict
x)	In N sam		ne phy	vsical and chemical properties of
	a)	Changes	b)	Do not changes
	c)	Depends on temp	d)	Does not depend on temp
			29	o. V
[6001]-	400	2	9,	

<b>Q</b> 2)	a)	Deduce Schrodinger's time independent wave equation. [6]
	b)	State and explain Heisenberg's uncertainty principle using the except of small and large wave packet. [5]
	c)	Calculate the energy difference between the ground state and first excited state of an electron in the rigid box of length 1A°. [4]
		OR
<b>Q</b> 3)	a)	State De Broglie's hypothesis. Derive an expression for De Broglies wavelength of an electron accelerated by a potential difference of 'V'.[6]
	b)	Define wave function. Write the conditions of well behaved wave function.  [5]
	c)	The uncertainty in the location of a particle is equal to its De Broglie wavelength. Show that the uncertainty in the velocity to a particle is equal
		to the particle velocity itself. [4]
	0	
<b>Q4</b> )	a)	With the help of bond theory of solids explain the classification of solids into conductors, semiconductors and insulators. [6]
	b)	What are solar cells? Draw I-V characteristics of solar cells and define the terms i) Short circuit current and ii) Open circuit voltage. [5]
	c)	The Hall coefficient of a specimen of a doped silicon is found to be $3.66 \times 10^{-4} \mathrm{m}^3/\mathrm{c}$ . The resistivity of the specimen is $1 \times 10^{-2} \Omega\mathrm{m}$ . Determine the mobility of the charge carriers.
		OR
<b>Q</b> 5)	a)	Explain the Hall effect with a neat labelled diagram. Lerive an expression for Hall voltage. [6]
	b)	Define Fermi level in semiconductors. For a P-N junction diode draw energy band picture showing the position of Fermi level in i) Zero bias and ii) Forward bias. [5]
	c)	Calculate the number of donors atoms which must be added to an intrinsic semiconductors to obtain the resistivity of $10^{\circ} \Omega cm$ . (Given mobility of electrons = $1000 \text{ cm}^2/\text{V sec.}$ ) [4]
[KNI	111	4002
LOOK	/ <b>1</b> ] -	4002

<b>Q6</b> )	a)	Differentiate between diamagnetism, paramagnetism and ferromagnetism	1.
		(Any two points) [6	
	b)	Define: [5	;]
		i) Magnetic permeability and	
		ii) Magnetic susceptibility	
		Obtain the relation between them.	
	c)	The critical magnetic field of niobium is $1 \times 10^5$ A/m at 8°K and $2 \times 10^5$	)5
		A/m at 0°K. Calculate the critical temperature of the element. [4]	[]
		OR	
<b>Q</b> 7)	a)	Explain artificial magnetic field in brief. Distinguish between Type-I &	&
		Type II superconductors. (Any 3 points). [6]	[,
	b)	Explain Melssner effect in brief. Show that superconductors ar	·e
		characterised by perfect diamagnetism. [5	<b>;</b> ]
	c)	Define the terms:	Į]
		i) Magnetic field strength (H)	
		ii) Magnetic induction (B)	
	6	characterised by perfect diamagnetism.  Define the terms:  i) Magnetic field strength (H)  ii) Magnetic induction (B)  iii) Magnetisation (M)  iv) Relation permeability (µ <sub>r</sub> )	
		iii) Magnetisation (M) iv) Relation permeability (μ <sub>r</sub> )	
		QR Q	
<b>Q</b> 8)	a)		n
		destructive testing for the measurement of thickness of a metal shee	
		using ultrasonic waves [6	-
	b)		, V
		Destructive Testing and Destructive Testing. (Any two points)	ע
	c)	Write any four applications of nanotechnology in the field of automobile	
	c)	Explain any one in brief. [4	
00)	,	Explain any one in brief.  OR  [4]	<b>[</b> ]
<b>Q9</b> )	a)	Explain any one in brief.  OR  Explain optical and mechanical properties of nanoparticles [6]	[i]
<b>Q9</b> )	,	Explain any one in brief.  OR  Explain optical and mechanical properties of nanoparticles [6]  What are nanoparticles? What is the effect of quantum confinement of	[] [] [] []
<b>Q9</b> )	a) b)	Explain any one in brief.  OR  Explain optical and mechanical properties of nanoparticles [6]  What are nanoparticles? What is the effect of quantum confinement of the properties of nanoparticles?  [5]	[] [] [] []
<b>Q9</b> )	a)	Explain any one in brief.  OR  Explain optical and mechanical properties of nanoparticles [6]  What are nanoparticles? What is the effect of quantum confinement of the properties of nanoparticles?  An ultrasonic pulse is sent through a copper block. The echo pulse is	[1] [5] [5] [6] [6] [7] [7] [7] [7] [7] [7] [7] [7] [7] [7
<b>Q9</b> )	a) b)	Explain any one in brief.  OR  Explain optical and mechanical properties of nanoparticles [6]  What are nanoparticles? What is the effect of quantum confinement of the properties of nanoparticles?  An ultrasonic pulse is sent through a copper block. The echo pulse is received after 4 µs. If velocity of ultrasonic in copper is 5000 m/s, calculated the sent through a copper is 5000 m/s, calculated the sent through a copper is 5000 m/s, calculated the sent through a copper is 5000 m/s, calculated the sent through a copper is 5000 m/s, calculated through the sent t	[] on [] is tte
